

Jamf Setup

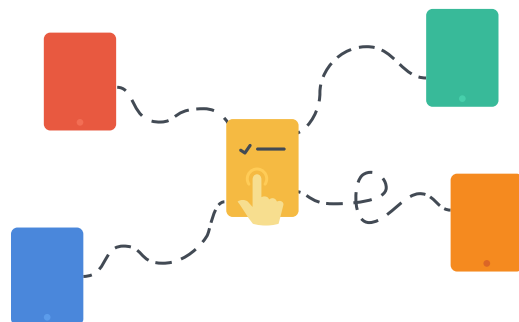

Unlock enhanced provisioning and shared device workflows with a few taps

Jamf Setup is an app designed for IT and end-users to instantly transform a device's configuration, completely over-the-air.

iOS and iPadOS have found their place at work with an astounding number of use cases in healthcare, retail, manufacturing and hospitality. What makes iOS and iPadOS so powerful is the flexibility to be anything and everything different individuals need the device to be. With the infinite number of configurations that enable productive mobile workers, IT and occasionally end-users have a need to set or change the way a device is setup. Help desk personnel want to rapidly deploy devices without touching Jamf Pro, and employees don't want to be slowed down by accidentally grabbing the incorrect device.

Jamf Setup is a flexible app that integrates with Jamf Pro to allow for immediate, purpose driven device provisioning and re-provisioning. It might be the only app on the device until a selection is made, or it could be part of a dynamic shared-device strategy. Jamf Setup is just as flexible as Jamf Pro and distills the power of the platform down to an intuitive app for IT and end-users that customizes each interaction with a device to fit their needs.

Here's how **Jamf Setup** brings flexibility to device setup:

Initial device provisioning

End users or IT departments can leverage Jamf Setup to create an app based setup workflow.

Customize the device per role

Brand the device for the specific use case by automating device background, lock screen messaging and home screen layout.

Shared-use device

Jamf Setup creates an intuitive way for end users to change the devices apps and settings – no IT involvement required.

Pairs well with Jamf Reset

For use cases that require the removal of personal information, Jamf Reset is a companion app that helps a user perform a secure MDM wipe on their assigned device. [Click here](#) for more information on Jamf Reset.

Streamline the experience

A one-size-fits-all device leaves distractions and unnecessary apps on the device. An overly restrictive device doesn't allow flexibility to get work done.

Provide the perfect mix of apps for a tailored experience with pre-built, role specific configurations.

Single login

Jamf Setup supports the Single Login workflow that simplifies and secures frontline shared-device deployments. With Single Login, a user's cloud-identity credentials can be used to instantly provision an iOS or iPadOS device for their individual needs – wirelessly and without IT interaction. Upon launching each supporting app, the user is logged in automatically without entering their username and password.

What about Apple's Shared iPad?

Jamf Pro also supports Apple's Shared iPad functionality for organizations with Apple School Manager and Apple Business Manager. Shared iPad requires a Managed Apple ID and password. While ideal for some scenarios,

Jamf Setup is another choice for provisioning and simple device customization. Reach out to Jamf to discuss your shared use requirements.

Multiple configurations. A single device. **100% over-the-air.**

Simplify device provisioning with Jamf Setup, a free companion app to Jamf Pro.
