

Reach more customers with streamlined interactions

Deliver an enhanced buying experience with Jamf and Apple

The retail experience just got better

As a retailer, you know the value of great customer service, efficient operations and instant communication. And with mobile technology, it has never been easier to implement within your stores.

Mobile technology offers you the chance to transform your business — unifying online and offline sales channels, coordinating with staff and suppliers, and bringing insight to each customer interaction.

Now, the only challenge is managing the mobile devices, apps and security configurations that make it all possible...

Whether you're managing a single retail location, a collection of stores or a distributed sales staff, Jamf and Apple make the retail dream come true.

“Being able to identify operational challenges and then use something like Jamf and Self Service to solve those and reduce our IT ticket queue – it’s invaluable.”

*– Ryan Colley,
Director, Information
Technology, GOAT.*

What's Possible in Retail with Jamf Pro and Apple:

Deployments made easy

Integrate with Apple deployment programs and ship pre-configured devices anywhere. Store teams can go from fresh out of the box to ready-to-use devices without time-consuming manual configuration.

Configuring iOS devices for the right use case

Configure iPad or iPhone for shared use with the patent-pending Jamf Setup iOS app. Supply a list of roles (like manager, cashier or guest) and users can select the appropriate configuration with one tap. No IT interaction or login credentials required.

Securing data and information

Leverage Apple's native apps and features to ensure the highest security and access requirements for your business, including PCI compliance. Lock iPads into a 'kiosk mode' or remove unnecessary apps from devices to ensure they're used for their intended purpose.

Dynamic inventory

Track the status of company-owned devices – without the headaches. Dynamic inventory capabilities automatically collect hardware, software and security statuses for productive product planning and budgeting.

Empowering employees

Empower store teams with self-service tools so anyone on staff can easily install corporate apps, printer drivers and connect to secure Wi-Fi without opening an IT ticket.

IT-free device wipes

One-click device wipe makes troubleshooting a breeze. Employees can initiate a total device wipe for security purposes or device transferring. Bypass additional integrations or manual warehouse re-provisioning.

Zero-day support

With zero-day support for apple releases, your iPad, iPhone, iPod Touch, Apple TV and Mac will automatically update, so you'll always be on top of the latest security and feature releases - without compromising the availability of your corporate apps.

Are you ready to transform the customer experience?

No platform delivers a more secure, intuitive user experience than Apple and no tool manages Apple devices better than Jamf Pro
